

The usage verification system
for night deposits

KASO CINEMA

KASO CINEMA ESD

Installation into existing or new night deposit

Kaso Cinema can be installed into an existing night deposit system, or it can be delivered as part of a new night deposit system. When investing in new technology, it is worth making a case-by-case assessment of whether the old drop mechanisms and night deposit safes should be simultaneously replaced by new ones.

When Kaso Cinema is installed into a night deposit with a cassette drop mechanism (YS-84), the cassette drop mechanism must be replaced by a so-called bag drop mechanism (automatically included in our offer). Equipment fitted with a bag drop mechanism (YS-84P) is already compatible with the Kaso Cinema verification system.

An outside hatch will be installed for older drop mechanisms (YS-64 and YS-74) since these models do not have it.

The necessary planning work and installation can be included in the price of the system.

Installation into day deposit

The Kaso Cinema Verification System can be installed into the new Kaso Deposit E2-300 and E3-300 day deposits. The verification system's technology can, in some cases, also be utilized with older day deposit models.

Kaso Oy

Lyhtytie 2, FIN-00750 Helsinki, Finland

Fax +358-9-386 0021

Inquiries: myynti@kaso.fi

Internet: www.kaso.fi

The Kaso Cinema system includes:

- opening the outside hatch with a PIN code, with the possibility for opening it with a key as a backup
- verification point in the night deposit's outside hatch
- verification point in the night deposit's drop mechanism
- 1–3 verification points inside the safe or night deposit vault
- printing of a receipt
- digital image recording
- readiness for transfer of information to the data systems of the bank or the cash service company

The following functions, among others, can be selected for the Kaso Cinema system:

- opening the outside hatch with a biometric identifier
- more verification points with the use of additional cameras
- viewing events on the surveillance monitor

KASO CINEMA – new and innovative Kaso technology

MORE INFORMATION AND CERTAINTY ABOUT THE USE OF A NIGHT DEPOSIT, STAGE BY STAGE.

Kaso's night and day deposit can be fitted with an entirely new usage verification system – Kaso Cinema. The surveillance cameras attached to the system record and verify in several different stages the drop of the security money bag. A bar code reader is used to identify the information of dropped security money bags, and the customer also has the option of printing a receipt for the use of the night deposit.

With the help of the Kaso Cinema verification system, your company will be able to offer its customers improved service and, at the same time, its own operations will become clearer and more efficient.

The Kaso Cinema system will benefit both the user and the owner of the night deposit by:

- increasing security and trust in the use of the night deposit
- easing the settling of responsibility questions
- making the work of people responsible for cash services more efficient
- removing any unclarity about the success of the drop
- better protecting the night deposit equipment from vandalism
- giving more information about the use of a deposit jointly used by several financial institutions, for example
- improving the customer's service

The first verification point, which is installed at the night deposit's hatch, photographs the user. The camera embedded into the night deposit is well-protected from vandalism.

1. Photographing the customer

Entering a unique PIN code opens the deposit. The deposit can also be equipped with other opening methods.

2. Entering the PIN code

The system includes a bar code reader which will record the security money bag's individual information when the drop is made.

3. Reading the bar code

A second verification point, embedded in the structures of the drop mechanism, closely photographs the security money bag as it is being placed in the drop slot. This can be used to ensure that the security money bag has been dropped into the night deposit.

4. Photographing the drop

Inside the night deposit, there are 1–2 cameras that are used to accurately verify the drop of security money bags into the safe or the night deposit vault. All photo material and information gathered by the verification points is digitally recorded. There can be no unclarity about the successful use of the night deposit.

5. Photographing inside the night deposit

When a receipt printer is attached to the system, the customer can print a receipt after successfully using the night deposit.

6. Printing of receipt

Kaso Cinema can be included as a part of a surveillance system. The screen displays the video footage of the drop mechanism's user, the placing of the security money bag into the drop mechanism and the drop of the security money bag into the safe or night deposit vault.

7. Possibility for surveillance

Kaso Cinema is a reliable and efficient usage verification system for night deposits.
