Secure Storage Solution

Working in an office with sensitive documentation means you must protect classified information but also retain easy access to it. With its ergonomic Enigma cabinets, Fichet-Bauche has created a solution for the secure and confidential storage of important documents.

Did you know?

The locks on Enigma cabinets are certified to provide extra protection for stored documents

Product Overview

Enigma security cabinets are designed to store documents that you need to access frequently. The cabinets come in five sizes, with either one or two doors, and entirely modular interior fittings, enabling you to adapt the cabinets as required.

A counter is also available as an option for checking whether someone else has opened the cabinet since your last visit. In addition, Enigma's ergonomically sculpted combination lock and door handle make the cabinet easy to use.

Security Features

- Double-panelled doors
- Plate steel body
- Hinges hidden to protect against manipulation
- Elliptical door bolts
- Mechanical and thermal relockers to block the bolts and prevent them from opening in the event of an attack

An optional counter means you can check if someone has accessed the cabinet.

Interior Fittings

A range of interior fittings is available for Enigma security cabinets to maximise use of the available space.

Interior fittings (from left): Adjustable shelf, extensible shelf, reinforced shelf for hanging files, extensible key rack, interior compartment, lockable compartment, gun rack (for 13 or 17 rifles)

Locks

Enigma security cabinets can be equipped with Fichet-Bauche's patented mechanical and electronic locks, all of which are A2P/EN 1300 certified.

The MxB - level B/E - is a high-security mechanical lock. Due to the innovative shape and design of the key, over 10 million different possible keys can be manufactured, making replication extremely difficult. For added security, a blocking system prevents the key from being removed until the door has been properly locked.

The Moneo mechanical combination lock - level B/E - permits several million different codes. Its scramble-upon-opening feature ensures that the dials are automatically reset to 0 after being used.

The Nectra electronic lock - level B/E - generates more than 110 million different code combinations and offers several levels of functionality. The standard version has 1 master code and 2-7 user codes, wrong-code blocking, time delay and a duress alarm. This can be upgraded with the audit trail function (which records up to 500 events) and a biometric digital fingerprint reader.
